

ATMOSPHERE

powered by **Lenovo**TM

infrastructure delivered simply, on demand

why CLOUD?

Scalability: resource is available as needed. No delays in expanding capacity, or waste of unused capability.

Utility style pricing: the service is accessed on demand and you only pay for the resource as you use it.

Location independence: the service can be accessed from anywhere with the Internet.

Physical security of data centre: data is stored in a Tier 3 data center, the safest, most secure facility available.

Data stored in Canada: your data is local, ensuring it is governed by Canadian laws, rules and regulations.

No downtime: the array of hardware resources available means that should some infrastructure fail, service will be unaffected.

No hardware CAPEX: the physical hardware is set up and maintained by us, saving you time and money.

cloud done right
